Digital Literacy

Project Report

Name: Anshika Singh
Registration no.: 25BCE10770
Branch: B.tech CSE Core
Year: Semester 2 (1 st Year)
Course Code : CSE0001
Date: 28/03/2026

INTRODUCTION

This project focuses on the concept of digital literacy and its importance in today’s digital world. As a student digital ambassador, the aim of this project is to create awareness among peers about the safe, effective, and responsible use of digital technologies. The project includes various tasks such as creating an infographic, building a digital portfolio, exploring coding and collaboration platforms, understanding professional email communication, and studying cybercrime awareness.

Through these activities, I gained practical knowledge about different digital tools and platforms that are useful for students. This project also helped me understand how to maintain a professional online presence and communicate effectively in academic and professional environments. Overall, this project enhanced my digital skills and awareness, which will be beneficial throughout my academic journey and future career.

Task 1:Infographic Write-up

I created a digital literacy awareness infographic using Canva, which is an easy-to-use online design tool. The infographic includes key topics such as the meaning of digital literacy, its importance, safe internet practices, and useful tools for students like Google Docs, GitHub, Canva, and Gmail.

The design is organized into sections using headings and bullet points, making the content simple and easy to understand. I used icons and colors to make the infographic visually attractive and engaging. The aim of this design is to help students understand how to use digital tools safely and effectively.

While creating the infographic, I found it interesting to explore different templates and design features available in Canva. However, I faced some difficulty in selecting suitable color combinations and arranging the content properly. Overall, this task improved my creativity and helped me learn basic design skills.

Task 2:Digital Portfolio Write-up

In this task, I created my digital portfolio by setting up accounts on platforms such as GitHub, LinkedIn, and Kaggle. GitHub is used to store and manage projects, especially for coding and technical work. LinkedIn is a professional platform where I added my educational details and will use it to connect with professionals and explore career opportunities. Kaggle is mainly used for data science and machine learning, where users can learn and practice new skills.

These platforms are important because they help in building a strong online presence and allow students to showcase their skills and achievements. Over the next four years, I plan to regularly update my GitHub with projects, improve my LinkedIn profile by adding skills and certifications, and explore Kaggle to enhance my technical knowledge.

This task helped me understand the importance of maintaining a professional digital identity from the beginning of my academic journey.

Task 3: Platforms Write-up

For this task, I explored coding and collaboration platforms. I created an account on HackerRank and completed a beginner-level coding challenge. This helped me understand basic programming concepts and improve my problem-solving skills. It was a useful experience that increased my confidence in coding.

In addition, I created a Google Form titled "Digital Literacy Awareness Quiz" with five questions. The form included both multiple-choice and short-answer questions. I also viewed the responses in Google Sheets, which helped me understand how data is collected and analyzed.

These platforms are very helpful for students as they support both learning and collaboration. Coding platforms improve technical skills, while tools like Google Forms make it easy to collect and manage information. Overall, this task enhanced my understanding of digital tools used in academics

Task 4: Email Etiquette Write-up

Effective communication is very important in academic and professional life. Poor digital communication can create misunderstandings and leave a negative impression. For example, sending an email without a subject line or using informal language while writing to a professor can be seen as unprofessional.

In this task, I learned how to write formal emails with a proper structure, including a clear subject line, polite greeting, well-organized body, and professional closing. I also understood the importance of using respectful language and maintaining clarity in communication. These skills will help me communicate effectively in future academic and professional situations.

Task 5: Cybercrime Write-up

While working on this task, I was honestly surprised to learn how common cybercrimes like phishing have become. What shocked me the most is how real fake messages and emails can look. Many people trust these messages without thinking twice and end up sharing important information like passwords or OTPs.

This made me realize how important it is to stay alert while using the internet. Earlier, I didn’t pay much attention to small details like checking links or verifying sources. But now, I understand that even one careless click can cause serious problems.

Because of this task, one habit I will definitely change is being more careful before clicking on any unknown link or message. I will also make sure to use strong

passwords and follow safe online practices to protect my personal information.

Conclusion

Overall, this project was a really useful learning experience for me. It helped me understand how important digital literacy is in our daily academic and personal life. I got hands-on experience with different tools like Canva, GitHub, and Google Forms, which made learning more practical and interesting. I also learned how to maintain a professional online presence and communicate properly through emails.

One of the most valuable parts was learning about cyber safety, which made me more aware of online risks. After completing this project, I feel more confident in using digital platforms responsibly and effectively in the future.
